Collins and sequenced by The Institute for Genomic Research (TIGR). The BAC library was generated from A. gambiae PEST strain DNA. All DNA was extracted from newly hatched first instar larvae to minimize the inclusion of DNA from microorganisms that inhabit the gut. The DNA is derived from mixed sexes of larvae. The BAC library was constructed at Texas A&M University BAC Center University, College Station, Texas 77843-2123, USA using a HindIII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

The CDNA was made by using Dynabead Oligo-dr priming (Dynal). PCR based library using a modified protocol from the SMARP PCR cDNA Synthesis Kit from Clontech. Directionally cloned into the UDG sites of pAMP1. Nematodes were provided by Dr. David Bird of North Carolina State University.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Email: est@watson.wustl.edu
The library was constructed by Brandi Chiapelli and Dr. James
McCarter (bohlapel@watson.wustl.edu & jmccarte@watson.wustl.edu) at
Washington University, St. Louis. DNA Sequencing by: Washington
University Genome Sequencing Center St. Louis.

WHE2331_F11_L202S Wheat pre-anthesis spike cDNA library Triticum
aestivum cDNA clone WHE2331_F11_L20, mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Site_1: EcoRI: Site_2: XhoI; Plants were grown in the Site_1: EcoRI: Site_2: XhoI; Plants were grown in the greenhouse. Whole spike with awns trimmed, white, green and yellow anther were collected and total RNA, and poly(A) RNA were prepared, a cDNA library was made, and the cDNA clones were in vivo excised to give pBluescript the cDNA and colored in the TI close lab (Choi, Close, Fenton) at the University of California, Riverside. Plasmid DNA preparations and DNA sequencing were performed in the OD Anderson lab (all other authors).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

/clone induced in floral induced in floral induced in light (flowering is induced by short-day conditions): 16 days after being returned to the greenhouse under natural long days during late April/carly May, meristems were harvested The library was made from poly-A RNA in the cloning vector lambda ZAP II. Clones to be sequenced were prepared by mass excision."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (bases 1 to 672)

/note=vVector: pBluescript II SK+; Site_I: ECORI; Site_2:
Xho1; The mRNA was isolated from roots of 8 day old
'Bragg' supernodulating mutant NTS382 seedlings that were
infected with Bradylizobium japonicum, strain USDA 110, 72
hours prior to harvest. Dr. Gary Stacey generously donated
the tissue. The roots were flash-frozen in liquid
nitrogen. Stratagene's conka Synthesis Kit (catalog number
200401) was used to synthesize the cDNA. First-strand
synthesis was performed with 5-methyl dCTP, hence the
ligated CDNA was hemimethylated. A modification of
Stratagene's first-strand synthesis primer was used. An
anchor nucleotide (V-A, C, or G) was added to the 3' end
of the primer [GAGAGAGAGAGAGACACATAGTCTCGAG(T)18V] to
anchor the primer at the 5' end of the poly(A) tract.
After second strand synthesis, the CDNA ends were filled
in with cloned Pfu DNA, ligated to ECORI adapters and
subsequently phosphorylated. The CDNA was then
precipitated and redissolved in sterile, Rhase.,
DNAse-free water. The XhoI site within the first-strand
synthesis primer was then restricted by digestion with
XhoI from Promega (40Vul); all XhoI sites in the CDNA
would be protected by their hemimethylated status. The
CDNA constructs were size-fractionated with a 500bp
cutoff, using Sephacryl s-500 High Resolution (Pharmacia
Biotech) in a 2-mm diameter column and a bed volume of
approximately lml. The column eluent was precipitated,
redissolved, and ligated into Stratagene's pBluescript II
XR Predigested vector (obluescript II SK(+) vector that
has been digested with EcoRI and XhoI, and phosphorylated
laboratory of Dr. Paul Keim and Dr. Virginia H. Coryell at
Northern Arizona University."

Cultivar PI 56734 is partially resistant to the disease SDS. Plant tissue (expanded leaves, folded leaves, and new shoots) were collected at 1, 6, 24, and 48 hrs. after inoculation and their mRNA pooled equally for CDNA construction. The library was prepared using the Stratagene pBluescript II SK(+) library construction kit. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dr) sequence with an XhOI restriction site. EcoRI adaptors were ligated to the blunt-ended cDNA fragments followed by xhOI digestion. The CDNA insert is protected from xhOI digestion in methylation during first strand synthesis. The CDNA fragments were directionally cloned into the EcoRI-XhOI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into the EcoRI-XhOI restriction site of the pBluescript vector. The ligated cDNA fragments were incoulated by Shuxian Li (Glen Hartman lab, University of Illinois). Library was constructed by Steve Clough (Lila Vodkin lab,

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Hummain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 75 CTGTCCGGTATTTAAATGCATTGACCGTCCCCGTATTTAAACAATGTGATAAATTACTCC 134

United valuations of the sequence of the sequence of submitted (11-JUN-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitily.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2: cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://Dacpac.med.buffalo.edu/drosophila_bac.htm.

library was prepared using the Stratagene pBluescript II
XR library construction kit. Complementary DNA was
synthesized from mRNA using a primer consisting of a poly
(dT) sequence with a XhoI restriction site. EcoRI adapters
were ligated to the blunt-ended cDNA fragments followed by
XhoI digestion. The cDNA fragments were directionally
cloned into the EcoRI: XhoI restriction site of the
pBluescript vector. The ligated cDNA fragments were
transformed into XLIO-Gold host cells. This library was
constructed by Dr. Randy Shoemaker and Dr. John
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Tel: 314 286 1800

The cDNA fragments were directionally cloned into the ECORI XhoI restriction sites of the palluescript vector. The vector was previously dephosphorylated. The ligated cDNA fragments were transformed into DHIOB by electroporation. Library is in LB medium with ampicillin and glycerol 8%. Average insert size: 800 bp.

/note="Vector: pBluescript II XR; Site_1: EcoRI; Site_2:
Xhoi; This cDNA library was constructed from mRNA isolated
from immature flowers of field grown plants. The cDNA
library was prepared using the Stratagene pBluescript II
XR library construction kit. Complementary DNA was
synthesized from mRNA using a primer consisting of a poly
(dT) sequence with a XhoI restriction site. EcoRI adapters
were ligated to the blunt-ended cDNA fragments followed by
XhoI digestion. The cDNA fragments were directionally
cloned into the EcoRI-XhoI restriction site of the
pBluescript vector. The ligated cDNA fragments were
transformed into XLIO-Gold host cells. This library was
constructed by Dr. Randy Shoemaker and Dr. John
Erpelding.

//note-*Vector: pBluescript II XR; Site 1: ECORI; Site_2:
XhoI; Root cDNA. The mRNA was isolated from entire roots
of 8 day old 'Williams' seedlings which were propagated on
paper towels with distilled water. Stratagene's cDNA
synthesis Kit (catalog #200401) was used to synthesize the
cDNA. First- strand synthesis was performed with 5-methyl
dCTP, hence the ligated cDNA is hemimethylated.
Stratagene's first-strand synthesis primer was used
[GAGAGAGAGAGAGACAACTACTCCAGG(T)-18]. After
second-strand synthesis, the cDNA ends were 'polished'
with clone Ptu DNA polymerase, ligated to EcoRi adapters,
and phosphorylated. The XhoI site within the first-strand
synthesis primer was restricted by digestion with XhoI;
all XhoI sites in the cDNA would be protected by their
hemimethylated status. The cDNA constructs were
size-fractionated with a 500bp cutoff, using GibcoREL Life
Technologies' cDNA Size Fractionation column. The column
Teluent was then ligated into Stratagene's pBluescript II
XR Predigested vector (pBluescript II SK(+) that had been
digested with EcoRI and XhoI, and phosphorylated). Both
the white and blue colonies appear to contain recombinant
plasmids with cDNA inserts. Blue colonies 9n-15) have been
sequenced, and possess putative cDNA inserts. This library
was constructed by Dr. Paul Kelm & Virginia H. Coryell,

/note—"Vector: pBluescript II XR; Site_I: ECORI; Site_2:
XhoI; This CDNA library was constructed from mRNA isolated
from 'Desloy 5710' seedling roots. Tissue was taken from
7-day-old seedlings that had been propagated on paper
towels with distilled water. Tissue was taken from the tip,
to the first lateral root, usually about 3cm from the tip,
and flash-frozen in liquid nitrogen. Stratagene's cDNA
Synthesis Kit (catalog number 200401) was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Washington University School of Medicine

germinated for three days of the cultivar Williams. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a NotI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by digestion with EcoRI and NotI. The ECORI-NotI restriction site of the pT773-Pac vector. The ligated cDNA fragments were directionally cloned into the ligated cDNA fragments were transformed into DH10B host cells (Gibco BRL). This library was constructed by Dr. Randy Shoemaker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       information

                                                  greenhouse grown plants. The library was prepared using greenhouse grown plants. The library was prepared using the Life Technologies pSuperScript CDNA library construction kit. Complementary DNA was synthesized from mRNA using a poly (dT) sequence with a Not I restriction site. Sal I linker adapters were ligated to the bluut-ended cDNA fragments were followed by Not I digestion. The CDNA fragments were directionally cloned into the Not I -Sal I restriction site of the pSPORTI vector. The ligated CDNA fragments were transformed into E. coli ElectroWax DH10B host cells (Gibco BRL). This library was constructed by Dr. Lila Vodkin and Dr. Anu Khanna."

Glycine.

(Glycine.)

(Glycine
xhoi; The cDNA library was constructed from mRNA isolated from very young seeds (less than 20mgs). The library was prepared using the Stratagene pBluescript II SK (+) library construction kit. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with an Xho I restriction site. Eco RI adaptors were ligated to the blunt-ended cDNA fragments followed by Xho I digestion. The cDNA insert is protected from Xho I digestion via methylation during first strand cDNA sythesis. The cDNA fragments were directionally cloned into the Eco RI-Xho Irestriction site of the pBluescript vector. The ligated cDNA fragments were transformed into Ecoli ElectroMax DH10B host cell. The library was constructed by Anu Khanna (Lila Vodkin lab, University of Illinois)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sah77c01.y1 Gm-c1049 Glycine max cDNA clone GENOME SYSTEMS CLONE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ŏ
                                    /note="Vector: pBluescript II SK+; Site 1: ECORI; Site 2: XhOI; The Clark NIL was constructed and seed was provided by Dr. J. Specht, University of Nebraska (Shoemaker and Specht, 1995). The CDNA library was constructed from mRNA isolated from whole seedlings of 3 week old greenhouse grown plants. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a XhOI restriction site and 3' anchor. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhOI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhOI restriction site of the pBluescript vector. The ligated CDNA fragments were transformed into DH10B host cells (GibcoBRL). The library was constructed in cooperation with Dr. Paul Keim's laboratory at Northern Arizon University."

the tissue. The roots were missarinoses in thighton nitrogen. Stratagene's cDNA Synthesis Kit (catalog number 200401) was used to synthesis the cDNA. First-strand synthesis was performed with 5-methyl dCTP, hence the ligated cDNA was henimethylated. A modification of Stratagene's first-strand synthesis primer was used. An 'anchor' nucleotide (V=A, C, or G) was added to the 3' end of the primer [GAGAGAGAGAGACACACACTCCCGAG(T)18V] to anchor the primer at the 5' end of the poly(A) tract. After second-strand synthesis, the cDNA ends were filled in with cloned Pfu DNA, ligated to EcosI adapters and subsequently phosphorylated. The cDNA was then precipitated and redissolved in sterile, KNase., DNAse-free water. The XhoI site within the first- strand synthesis primer was then restricted by digestion with XhoI from Promega (40V/ul); all XhoI sites in the cDNA would be protected by their hemimethylated status. The CDNA constructs were size-fractionated with a 500Pp cutoff, using Sephacryl S-500 High Resolution (Pharmacia Blotech) in a 2-mm diameter column and a bed volume of approximately lm. The column eluent was precipitated, redissolved, and ligated into Stratagene's please that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 (bases 1 to 581)

//decenvole="Vactor: paluescript II SR+; Site_I: ECORI; Site_2: Ahol; The mRNA was isolated from roots of bulked Minsoy x Noir RI progeny that are phenotypically susceptible to flooding damage. The plants were flooded (submerged) for 24 hours prior to harvest. Dr. Tara VanToal generoually provided the isolated mRNA. The roots were flash- frozen in liquid nitrogen. Stratagene's cDNA synthesize the cDNA. First-strand synthesis was performed with 5-methyl dCTP, hence the ligated cDNA was hemimethylated. A modification of Stratagene's first-strand synthesis primer was used. An 'anchor' nucleotide (V=A, C, or G) was added to the 3' end of the primer at the 5' end of the poly(A) tract. After second-strand synthesis, the cDNA ends were filled in with cloned Pfu DNA, ligated to ECORI adapters and subsequently phosphorylated. The cDNA was then precipitated and redissolved in sterile, RNase., DNase-free water. The XhoI she within the first- strand synthesis primer was then restricted by digestion with XhoI from Promega (400/ul); all XhoI sites in the cDNA would be protected by their hemimethylated status. The cDNA constructs were size-fractionated with a 500bp cutoff or a 2-mm diameter column and a bed volume of subsequence of the stract column and a bed volume of

XhOI; The mRNA was isolated from roots of bulked Minsoy x
NoIf RI progeny that are phenotypically susceptible to
flooding damage. The plants were flooded (submerged) for
24 hours prior to harvest. Dr. Tara Vanfoal generously
provided the isolated mRNA. The roots were flash-frozen
in liquid nitrogen. Stratagene's cDNA Synthesize the CDNA.
First-strand synthesis was used to synthesize the CDNA.
First-strand synthesis was berformed with 5 methyl dCTP,
hence the ligated CDNA was hemimethylated. A modification
of Stratagene's first-strand synthesis primer was used. An
anchor' nucleotide (V=A, C, or G) was added to the 3' end
of the primer at the 5' end of the poly(A) tract.
After second-strand synthesis, the CDNA ends were filled
in with cloned Pfu DNA, ligated to ECONI adapters and
subsequently phosphorylated. The CDNA was then
precipitated and redissolved in sterile, RNase.,
DNasse-free water. The XhOI site within the first- strand
synthesis primer was then restricted by digestion with
XhOI from Promega (400/ul); all XhOI sites in the CDNA
would be protected by their hemimethylated status. The
